

## DONOR-LINKED FAMILIES IN THE DIGITAL AGE

How are siblings who were conceived using the same sperm or egg donor making connections in the absence of legal support? What is it like to discover you are part of a fifty plus donor sibling group? How are donor-conceived adults using new technologies to connect with their genetic family and explore their identity? This edited collection considers the donor-linking experiences of donor-conceived adults and children, recipient parents, and donors in a global context. It includes contributions from legal academics, social workers, sociologists, psychologists, and policy makers who work in the assisted conception field. As a result, it will be of particular interest to scholars of reproductive law, sociology, and digital media and reproductive technologies. It will also engage those following the debate around donor linking and the use of do-it-yourself technologies, including direct-to-consumer genetic testing and social media.

**FIONA KELLY** is Dean of La Trobe University Law School, Victoria, Australia. Her research explores the intersection between family law and health law, focusing on the legal regulation of assisted reproduction. Her research has contributed to Australian and Canadian law reform in the areas of assisted reproduction and family diversity.

**DEBORAH DEMPSEY** is a sociologist and Adjunct Associate Professor in the Department of Social Sciences at Swinburne University of Technology, Victoria, Australia. Her broad research interests encompass fertility, technology, and family change. She has published extensively on queer parenthood and families created through donor conception in Australia, and her work has been influential in law reform processes.

**ADRIENNE BYRT** is a postdoctoral research fellow at Swinburne University of Technology, Victoria, Australia. As a design sociologist, her research draws together feminist theory and design methods to highlight systemic gendered inequity. Her interdisciplinary research spans the sociology of families, mothering and motherhood, women's financial safety, and service design.

## *Acknowledgements*

A project of this magnitude, especially one that was completed during the Covid-19 pandemic, succeeds at least in part because of the support provided by others. We would like to thank our families and colleagues for their ongoing encouragement of our work, as well as each of the contributors for persevering through some very difficult times. Across the studies included in this collection, we would also like to extend our gratitude to the participants who shared their experiences as donor-conceived people, donors, and recipient parents. We are proud of the outcome and believe it will make an important contribution to what is a rapidly evolving debate.

This book was made possible by funding from the Australian Research Council Discovery Grant scheme for the project ‘Families of Strangers? The Socio-Legal Implications of Donor Linking’ (DP180100188).
