Subject index

- Abel's
 discovery of elliptic functions, 451
 inequality, 15
 integral equation, 219, 238, 239
 method of establishing addition-theorems, 464, 522, 523, 560, 565
 special form, $\phi_m(z)$, of the confluent hypergeometric function, 370
 test for convergence, 16
 theorem on continuity of power series, 55
 theorem on multiplication of convergent series, 57
- Abrided notation
 for products of theta-functions, 492, 520, 524
 for quotients and reciprocals of elliptic functions, 520, 524
- Absolute convergence, 17, 26
 Cauchy's test for, 20
 D'Alembert's ratio test for, 20
 De Morgan's test for, 21
- Absolute value, *see* Modulus and Value, absolute
- Absolutely convergent double series, 26
 fundamental property of, 24
 infinite products, 30
 multiplication of, 27
 series, 17
- Addition-formula
 for Bessel functions, 374, 399, 468, 474, 551
 for Gegenbauer's function, 353
 for the Jacobian zeta-function and for $E(u)$, 547
 for the sigma-function, 474
 for the third kind of elliptic integral, 551
 for the Weierstrassian zeta-function, 468
 for theta-functions, 491
