

CONTENTS

AUTHOR'S PREFACE	<i>page ix</i>
------------------	----------------

CHAPTER I

The systematics of stable nuclei

1.1. Empirical definition of stability, p. 1. **1.2.** Neighbouring stable isobars, p. 6. **1.3.** The distinction between even and odd, p. 10. **1.4.** 'Missing' stable species, p. 15. **1.5.** The significance of the isotopic number, $A - 2Z$, p. 19. **1.6.** Favoured values of Z and N , p. 25.

CHAPTER II

Regularities in α -disintegration

2.1. The Geiger-Nuttall rule, p. 27. **2.2.** Survey of new data, p. 33. **2.3.** The effect of spin changes, p. 53. **2.4.** Disintegration energies, p. 64. **2.5.** Discontinuities in nuclear building and the α -activity of lighter nuclei, p. 70. **2.6.** Radioactive series branching and the systematics of 'pure α -active' species, p. 83.

CHAPTER III

Regularities in β -disintegration

3.1. The Sargent diagram, p. 92. **3.2.** Sargent diagrams for positron emission and the electron-capture process, p. 108. **3.3.** Disintegration energies and relative stability rules, p. 118. **3.4.** 'Delayed' neutron emission, p. 143.

CHAPTER IV

Spontaneous fission and the number of the elements
