	<i>Preface</i>	page ix
	<i>Notation</i>	xiv
1	Preliminaries and tools	1
	Exercises	8
2	Linear dispersive equations	12
2.1	Estimates on the real line	14
2.2	Estimates on the torus	22
2.3	The Talbot effect	32
	Exercises	46
3	Methods for establishing wellposedness	49
3.1	The energy method	50
3.1.1	A priori bounds	51
3.1.2	Existence and uniqueness	52
3.1.3	Growth bounds for KdV with potential	59
3.2	Oscillatory integral method	60
3.3	Restricted norm method	64
3.3.1	L^2 solutions of KdV on the real line	64
3.3.2	Low regularity solutions of KdV on the torus	70
3.3.3	Forced and damped KdV with a potential	80
3.4	Differentiation by parts on the torus: unconditional wellposedness	82
3.5	Local theory for NLS on the torus	90
3.5.1	L^2 wellposedness of cubic NLS on the torus	91
3.5.2	H^s local wellposedness of the quintic NLS on the torus	93
3.6	Illposedness results	97
	Exercises	107

4	Global dynamics of nonlinear dispersive PDEs	111
4.1	Smoothing for nonlinear dispersive PDEs on the torus	112
4.1.1	Cubic NLS on the torus	112
4.1.2	The KdV equation on the torus	117
4.1.3	Proof of Proposition 4.7	127
4.2	High–low decomposition method	129
4.3	The I -method for the quintic NLS equation on the torus	135
	Exercises	151
5	Applications of smoothing estimates	154
5.1	Bounds for higher order Sobolev norms	154
5.2	Almost everywhere convergence to initial data	160
5.3	Nonlinear Talbot effect	162
5.4	Global attractors for dissipative and dispersive PDEs	164
5.4.1	The global attractor is trivial for large damping	169
5.4.2	Bounds on the forced KdV equation	171
	Exercises	172
	<i>References</i>	175
	<i>Index</i>	185
