<i>Preface</i>	<i>page xi</i>
1 LOCATION AND DISPERSION	
1 Location or central tendency	1
2 Change of origin and unit	2
3 Variance. Standard deviation	3
4 Change of origin and unit	4
5 Dispersion or variability	5
6 <i>Exercises</i>	6
7 From random sample to parent population	8
8 Large samples	10
9 <i>Exercises</i>	10
10 Frequency distribution with unequal group intervals	10
11 Histogram	11
12 Frequency distribution with equal group intervals	12
13 Mean of frequency distribution	13
14 First moments	13
15 Variance and standard deviation of a frequency distribution	14
16 Change of origin and unit	15
17 Second, third and fourth moments	15
18 <i>Exercises</i>	16
2 THE NORMAL DISTRIBUTION	
19 The normal probability curve	21
20 Negative values of x	21
21 The graph of the function	21
22 The area under the curve	21
23 <i>Exercises</i> using Simpson's rule	22
24 The area under the graph to the left of a given ordinate	23
25 $A(x)$ for negative values of x	23
26 The mean and the standard deviation	24
27 How to construct a normal frequency distribution when given its mean and its standard deviation	25
28 The histogram	26
29 <i>Exercises</i>	26
30 An example in which it is assumed that the variability of production can be controlled	27

CONTENTS

31	An example in which the mean is adjusted, the variability remaining constant	page 28
32	<i>Exercises</i>	29
3	PROBABILITY	
33	Casting a die	30
34	Playing cards	30
35	Tossing a coin	30
36	Meaning of probability	30
37	Definition of probability	31
38	Success and failure	32
39	Addition rule	32
40	Independent events	34
41	Conditional probabilities	34
42	Examples	35
43	<i>Exercises</i>	36
44	<i>A posteriori</i> probabilities	38
45	Bayes' theorem	39
46	<i>Exercises</i>	40
4	PROBABILITY DISTRIBUTIONS	
47	The symbol $\binom{n}{r}$ or nC_r	41
48	The factorial notation $n!$ or \underline{n}	41
49	Selecting and rejecting	42
50	The use of $\binom{n}{r}$ in examples on probability	42
51	Experiments with playing cards	43
52	The number of ways of selecting like things	44
53	Examples	45
54	<i>Exercises</i>	47
5	THE BINOMIAL DISTRIBUTION	
55	Throwing six dice	49
56	The binomial expansion of $(q + p)^n$	49
57	<i>Exercises</i>	50
58	Tossing five coins	51
59	<i>Exercise</i>	51
60	The sampling-bottle	51
61	<i>Exercises</i>	53
62	Sampling in industry	53
63	Examples	53
64	<i>Exercises</i>	56
	vi	

CONTENTS

65	Verification that the mean of the binomial distribution is np	page 56
66	The mean and variance of the binomial distribution	57
67	How to estimate the proportion of black balls in a sampling-bottle	58
68	Estimation of the proportion of defective items in a bulk	59
69	<i>Exercises</i>	59
6 THE POISSON DISTRIBUTION		
70	Introductory	60
71	<i>Exercise</i>	62
72	The derivation of the Poisson distribution	62
73	The mean and variance of the Poisson distribution	63
74	An example in which p is small and n is large	64
75	A traffic example	64
76	<i>Exercises</i>	64
7 THE χ^2 -DISTRIBUTION		
77	The null hypothesis	67
78	The use of χ^2 for testing normality	67
79	The calculation of χ^2	68
80	The number of degrees of freedom, ν	68
81	The acceptance or rejection of the null hypothesis	69
82	More precise interpretation of the P values	69
83	A distribution which is not normal	70
84	<i>Exercises</i>	71
85	Testing a binomial distribution	72
86	<i>Exercises</i>	73
87	Testing a Poisson distribution	73
88	A distribution may conform to both the binomial and the Poisson laws	74
89	<i>Exercises</i>	75
8 THE USE OF χ^2 IN TESTING CONTINGENCY TABLES		
90	Introductory experiment. Throwing a single die	76
91	An experiment with playing cards	77
92	Contingency tables	77
93	An example from an engineering workshop	77
94	Expected frequencies in a given ratio	78
95	An example from genetic theory	79
96	An example illustrating Yates's correction when $\nu = 1$	79
97	<i>Exercises</i>	80
98	A 2×2 contingency table	81
99	Experiments using coloured dice	82
		vii

CONTENTS

100	<i>Exercises</i>	<i>page</i> 83
101	The $h \times k$ contingency table	84
102	<i>Exercises</i>	85
9	SAMPLES AND SIGNIFICANCE	
103	Sample estimates of population values	89
104	Two-tail probability	90
105	The frequency distribution of means of samples	91
106	Standard error and confidence limits of large samples	93
107	Use of the t -distribution for small samples	93
108	<i>Exercises</i>	94
109	The significance of a single mean (large samples)	94
110	Example	95
111	<i>Exercises</i>	95
112	The significance of a single mean (small samples)	95
113	<i>Exercises</i>	97
114	The variance of the sums = the sum of the variances. The variance of the differences = the SUM of the variances	97
115	Experiment with two coloured dice	98
116	Three or more dice	99
117	Example	99
118	<i>Exercises</i>	100
119	$\text{Var}(a_1x_1 + a_2x_2 + \dots + a_nx_n) = a_1^2 \text{var } x_1 + a_2^2 \text{var } x_2 + \dots + a_n^2 \text{var } x_n$	101
120	Example	102
121	The significance of the difference between the means of two large samples	102
122	Example	103
123	<i>Exercises</i>	104
124	The significance of the difference between the means of two small samples	105
125	Example	106
126	<i>Exercises</i>	107
10	QUALITY CONTROL	
127	Control of a given dimension	112
128	Control of the fraction defective	112
129	The value of random sampling	112
130	The estimation of the standard deviation from the mean range of samples of n observations	113
131	Example	113
132	A quality-control chart for means	113
133	<i>Exercise</i>	115
134	A quality-control chart for ranges	116
viii		

CONTENTS

135	<i>Exercise</i>	<i>page</i> 117
136	Allowable width of control limits when tolerance limits are specified	117
137	<i>Exercise</i>	118
138	Control chart for fraction defective	118
139	<i>Exercise</i>	120
11	METHOD OF LEAST SQUARES	
140	A bivariate distribution	121
141	The scatter diagram: direct correlation	121
142	Inverse correlation	122
143	Absence of correlation	122
144	How to calculate the equation of the least squares line of regression of y on x	122
145	The formal derivation of the normal equations	126
146	The regression line passes through the mean of the array	127
147	The regression coefficient	127
148	The line of regression of x on y	128
149	The two lines of regression in one diagram	129
150	Dichotomy	130
151	<i>Exercises</i>	130
12	CORRELATION BY PRODUCT MOMENTS	
152	The coefficient of correlation r_{xy}	136
153	The calculation of r_{xy}	137
154	The coefficient of correlation and the regression lines for grouped data	139
155	The significance of r_{xy}	142
156	<i>Exercises</i>	142
13	CORRELATION BY RANKS	
157	The coefficient of rank correlation	144
158	The formula for the coefficient of rank correlation	144
159	The derivation of the formula for the coefficient of rank correlation	145
160	Method of ranking equal values of a variate	146
161	Kendall's coefficient of rank correlation τ	147
162	<i>Exercises</i>	151
14	ANALYSIS OF VARIANCE CALCULATIONS	
163	Significance of variance ratio	154
164	Example of a variance ratio which is significant	154
165	Example in which neither F nor t are significant	155
166	<i>Exercise</i>	156
167	Single factor analysis of variance	156

CONTENTS

168	Better method of calculating the mean squares	<i>page</i> 159
169	Assumptions made in the calculation	160
170	<i>Exercises</i>	160
171	Two-factor analysis of variance	171
172	Better method of calculating the mean squares	164
173	When one of the between-mean-squares is not significant	166
174	When the residual-mean-square is significantly greater than either of the between-mean-squares	166
175	<i>Exercises</i>	167
15	MISCELLANEOUS EXERCISES	169
	<i>Answers to exercises</i>	179
	<i>Glossary</i>	186
	<i>Appendix</i>	195
Tables A1	Values of $y = \frac{1}{\sqrt{(2\pi)}} e^{-\frac{1}{2}x^2}$	195
A2	Values of $A(x) = \frac{1}{\sqrt{(2\pi)}} \int_{-\infty}^x e^{-\frac{1}{2}t^2} dt$	196
A3	Rules for determining ν when applying the χ^2 -test	198
A4	Percentage points of the χ^2 -distribution	199
A5	Percentage points of the t -distribution	200
A6	e^{-x} (for use with the Poisson distribution)	201
A7	5 per cent points of the F -distribution	202
A8	$2\frac{1}{2}$ per cent points of the F -distribution	203
	<i>Index</i>	205
