<i>Preface to the Second Edition</i>	<i>page xi</i>
<i>Preface to the First Edition</i>	xiii
1 Graphs and Groups: Preliminaries	1
1.1 Graphs and digraphs	1
1.2 Groups	3
1.3 Graphs and groups	7
1.4 Edge-automorphisms and line-graphs	10
1.5 A word on issues of computational complexity	13
1.6 Exercises	15
1.7 Notes and guide to references	17
2 Various Types of Graph Symmetry	18
2.1 Transitivity	18
2.2 Asymmetric graphs	25
2.3 Graph symmetries and the spectrum	29
2.4 Simple eigenvalues	31
2.5 Higher symmetry conditions	32
2.6 Exercises	35
2.7 Notes and guide to references	38
3 Cayley Graphs	39
3.1 Cayley colour graphs	39
3.2 Frucht's and Bouwer's Theorems	42
3.3 Cayley graphs and digraphs	44
3.4 The Doyle-Holt Graph	47
3.5 Non-Cayley vertex-transitive graphs	48
3.6 Coset graphs and Sabidussi's Theorem	49
3.7 Double coset graphs and semisymmetric graphs	51

viii	<i>Contents</i>	
3.8	Hamiltonicity	53
3.9	Characters of abelian groups and Cayley graphs	55
3.10	Growth rates	56
3.11	Exercises	58
3.12	Notes and guide to references	62
4	Orbital Graphs and Strongly Regular Graphs	64
4.1	Definitions and basic properties	64
4.2	Rank 3 groups	68
4.3	Strongly regular graphs	69
4.4	The Integrality Condition	70
4.5	Moore graphs	73
4.6	Exercises	75
4.7	Notes and guide to references	77
5	Graphical Regular Representations and Pseudosimilarity	79
5.1	Elementary results	79
5.2	Abelian groups	80
5.3	Pseudosimilarity	81
5.4	Some basic results	82
5.5	Several pairs of pseudosimilar vertices	84
5.6	Several pairs of pseudosimilar edges	85
5.7	Large sets of mutually pseudosimilar vertices	86
5.8	Exercises	88
5.9	Notes and guide to references	91
6	Products of Graphs	92
6.1	General products of graphs	93
6.2	Direct product	95
6.3	Cartesian product	97
6.4	More products	99
6.5	Stability and two-fold automorphisms	102
6.6	Additional remarks on graph products	105
6.7	Exercises	105
6.8	Notes and guide to references	108
7	Special Classes of Vertex-Transitive Graphs and Digraphs	109
7.1	Generalised Petersen graphs	110
7.2	Kneser graphs and odd graphs	114
7.3	Metacirculant graphs	115
7.4	The quasi-Cayley graphs and digraphs	117
7.5	Generalised Cayley graphs	119

<i>Contents</i>		ix
7.6	Exercises	120
7.7	Notes and guide to references	122
8	The Reconstruction Conjectures	123
8.1	Definitions	124
8.2	Some basic results	126
8.3	Maximal planar graphs	132
8.4	Digraphs and degree-associated reconstruction	136
8.5	Exercises	138
8.6	Notes and guide to references	139
9	Reconstructing from Subdecks	140
9.1	The endvertex-deck	140
9.2	Reconstruction numbers	141
9.3	The characteristic polynomial deck	144
9.4	Exercises	147
9.5	Notes and guide to references	147
10	Counting Arguments in Vertex-Reconstruction	149
10.1	Kocay's Lemma	149
10.2	Counting spanning subgraphs	151
10.3	The characteristic and the chromatic polynomials	154
10.4	Exercises	155
10.5	Notes and guide to references	156
11	Counting Arguments in Edge-Reconstruction	157
11.1	Definitions and notation	157
11.2	Homomorphisms of structures	159
11.3	Lovász' and Nash-Williams' Theorems	163
11.4	Extensions	166
11.5	Exercises	168
11.6	Notes and guide to references	169
	<i>References</i>	171
	<i>List of Notations</i>	185
	<i>Index of Terms and Definitions</i>	187
