Index

10 rights of medication administration, 127

ABC: Airway, Breathing and Circulation, 171

abnormalities
  CHD’s structural abnormality as common cause of death, 209
  congenital, 46

seeking advice/assistance on abnormal findings, 45

visual inspection of skin for, 45

Aboriginal and Torres Strait Islander people, 24–5

abuse, 24–5, 26

barriers to breastfeeding due to, 244

child and parent factors that may increase vulnerability to, 24–5

see also child abuse accountability, 14, 33

acid mantle, 105

acquired heart disease, 49–50, 209

activities, 10, 82, 87–8, 89–91, 170, 172, 211

causing greater pain levels, 159

acute anxiety, 62–3

acute pain, 147

adhesive dressings, 107

adjuvative medications, 152–3

admission notes, 103

adolescents
  challenges to family values, 84

with CHD, 209

adults, 82

acute anxiety, 62–3

acute pain, 147

adhesive dressings, 107

adolescents/families, 88–9

health education and anticipatory guidance, 92–3

high-risk behaviours and experimentation, 67–8, 82

identifying as LGBT, 85

neurodevelopment, 67

nursing skills, 82–93

physical needs of, 82–3

sexual and reproductive health concerns, 84–5

social needs of, 84

systems of influence, 65

adrenalectomy, 138

adulthood, 82

advocacy, 19, 32

affect and mood (MSE), 69–70

afferent nerve endings, 245

age, 86–7, 92

chronological age as factor affecting communication, 2

considerations with pain, 149

correct dose for weight and age, 126

pressure injury sites/risks differing according to, 109

understanding, 50

of young people’s consent to sexual activity, 87–8

age-appropriate language/explanations, 64, 102–3, 149, 283

agency
  inter-agency work, child protection, 28–30

support for breastfeeding, 235

aggression, 62–3, 65, 67

air flow meters vs oxygen flow meters, 189

alarms, 258–9, 282

alcohol and drug use, 21–2

harmful levels of risky drinking, 68

alcohol swabs, 133

alertness, 83

allergies, 283

alveoli, 193, 235

epithelial cell differentiation to lactocytes, 235

ambulance service, 49, 52

anaesthetic gels/creams, 133, 283

anaesthetics, 153

analgesia, 109, 115, 117, 153, 155–6, 157–61, 227

anaphyplaxia, 138

anatomy
  breast anatomy, 235–6

correct terms, 103

differences in infants and young children, 46

of an infant’s mouth, 239–40

ankyloglossia (tongue-tie), 46, 244

anorexia nervosa, 66

anterolateral thigh muscle, 132

antibiotics, 115, 222

anticipatory guidance, 92–3

antihistamines, 115

antipsychotics, 73–4

antisepsic cleaning, 105

anxiety, 2, 7–8, 65, 68, 147, 149

reducing, 10, 64–5, 109, 130–2

anxiety, 73–4

appearance, 69–70

general appearance and behaviour, 45

intimal overall appearance and behaviour, 45

aqueous cream, 113

areola, afferent nerve endings, 236

arrhythmias, types – rate, rhythm or conduction, 211

art/art therapy, 10

as toddlers’ communication means, 6

arterial blood gas analysis, 177

arterial oxygen saturation, 193

Aseptic Non-Touch Technique (ANTT), 136, 198

aspiration, 133

asent to treatment, 10

assessment
  of cardiac electrical activity on frontal or horizontal planes, 211

child assessment and injections, 138

of circulatory signs post fluid resuscitation, 235–6

clinical assessment, 48–9

conducting, 38

considerations, 20

determining risk factor amelioration, 4

developmental assessment, 20

equipment for, 39

familial incorporation into, 60

family health assessment, 19–22

of family resources, 19–20

flexible process, 39

throat infection, 170
thrombotic occlusion, 261–3
thrush, 115
tuberculosis, 237
timing, 138
tinea, 113
toddlers communicating with, 5–6
communication techniques, 6
difficulty in self-expression, 5
distraction techniques, 133
egocentricity of, 3, 6
literal language interpretation, 6
parent teaching points, 40
positioning, 39, 43
toddler toilet training, 277
cognitively and physically ready for, 279–80
delaying, 276, 279–80
difficulties, 279–80
temporary regression due to
traumatic events, 279
medical emergency team (MET), 30
multidisciplinary teams, 30, 87
paediatric healthcare teams, 11–14
pain management team, 159
reflective practice within teams, 33
tears, absence of, 103
techniques
assessment techniques, 39–41
communication techniques, 3, 6,
7, 9, 75–6
designed to distract, see distraction techniques
‘horizontal stretching’ technique (dressing), 107
play and storytelling, 10
sterile techniques, 283, 285
teen pregnancy, 84–5
Teen with a Stoma, 289
teenagers, see young people
temper tantrums, 5
temporal assessment, 60
temporal paralysis, 170
Ten Steps to Successful Breastfeeding, 234
tension pneumothorax, 225
teratogens, 209
tests, 53
therapeutic relationships, 9, 18–19
cornerstones, 2, 87
in presence of child-protection concerns, 18
therapy, 64, 108, 111, 113–14, 185–6,
187, 190–1, 196–7, 254–6
pharmacological therapies, 152–3
thermal pain relief strategies, 163
thinking in abstract terms, 7
egocentricity, see negocentric thinking
higher order thinking, 83–4
imaginative and inventive ‘magical’ thinking, 6, 149
rational judgement, 67
‘third-person’ approach, 91
thorax, 48
thoughts, 6, 13, 69–70, 149
disturbed, 70
three checks and six rights of
medication administration, 125, 127
throat infection, 170
thrombotic occlusion, 261–3
thrush, 115
systemic lupus erythematosus, 209
talipes (‘club foot’), 52
Tanner stages, 39
tape measures, flexible, 45
taste, 5
teams/teamwork
CAMHS team, 62–3, 64–5
challenging other team members, 13
inter-team communication
regarding oxygen therapy goals/parameters, 185
medical emergency team (MET), 49, 52
multidisciplinary teams, 30, 87
paediatric healthcare teams, 11–14
pain management team, 159
reflective practice within teams, 33
tears, absence of, 103
techniques
assessment techniques, 39–41
communication techniques, 3, 6,
7, 9, 75–6
designed to distract, see distraction techniques
‘horizontal stretching’ technique (dressing), 107
play and storytelling, 10
sterile techniques, 283, 285
teen pregnancy, 84–5
Teen with a Stoma, 289
teenagers, see young people
temper tantrums, 5
temporal assessment, 60
temporal paralysis, 170
Ten Steps to Successful Breastfeeding, 234
tension pneumothorax, 225
teratogens, 209
tests, 53
therapeutic relationships, 9, 18–19
cornerstones, 2, 87
in presence of child-protection concerns, 18
therapy, 64, 108, 111, 113–14, 185–6,
187, 190–1, 196–7, 254–6
pharmacological therapies, 152–3
thermal pain relief strategies, 163
thinking in abstract terms, 7
egocentricity, see negocentric thinking
higher order thinking, 83–4
imaginative and inventive ‘magical’ thinking, 6, 149
rational judgement, 67
‘third-person’ approach, 91
thorax, 48
thoughts, 6, 13, 69–70, 149
disturbed, 70
three checks and six rights of
medication administration, 125, 127
throat infection, 170
thrombotic occlusion, 261–3
thrush, 115
United Nations Declaration of the Rights of the Child, 32
Unspecified Feeding and Eating Disorder (UFED), 66–7
urinalysis, 277
urinary catheterisation, 256, 276, 282–5
catheter use in infants and children, reasons for, 282–3
urinary elimination, 276
output measurement, 276–7
urinary output, 256, 276–7
urinary retention, 159–60
urinary specimens, 277–8
urinary tract infections, 283
urine, 254
infants’ inability to concentrate urine (in renal system), 254
urine collection bags, 277
urodynamic studies, 261
vaccination history review, 22
Valsalva manoeuvre, 226–7
values, 2, 84, 88
vascularisation, 236
vastus lateralis (VL) muscle, 132, 135–7
venepuncture, 133
ventricular fibrillation, 211
ventriculitis, 179–80
ventriculoperitoneal (VP) shunt, 172–3
monitoring of the paediatric patient with, 173
possible complications, 173
ventral to lateral site, 135, 137–8
verbal expression, 2–3
vertical headboards, 43
vesicants, 112
vesicles, 116
video-conferencing, 32
violence, 21–2
visual cardiovascular assessment, 50–1
visual inspection, 38, 41, 45
visual surveys, 45
vital signs, 175
vitamin D, dietary intake of, 82
vocabulary, 6
voice
child’s voice in healthcare, 2–3
one’s own voice, 13
see also right to be heard
vomiting, 159–60, 254
vulnerability, 75–6, 103, 254, 276
to abuse or neglect, 24–26
decreasing, 25–6
multi-sectoral approach to protecting vulnerable children, 28–30
to sexual harassment, 85
wall mounted stadiometers, 43
warmth, 39
water, 238
weaning (cessation of breastfeeding), 236
weight, 132
correct dose for weight and age, 126, 127
fluid resuscitation volume generally calculated based on, 255–6
as important indicator of health and nutritional status, 41–2
insufficient weight gain, 50
percentile charts for, 42
significant gain in skeletal weight during adolescence, 82
weight gain, 50, 83
weight-bearing activity, 82
weight-bearing activity, 82
well-child health checks, 38
wellbeing, 21–2, 72, 84, 93
impact of bullying on, 65–6
importance of fluid and electrolyte balance to, 254
wet wrap therapy (WWT), 113–14
whole-of-family approach, 88–9
withdrawal, 65
Wong Baker Faces Pain Scale, 150
work of breathing (WOB), 191, 193, 194
workloads, increasing, 11
workplaces
peer support and collegiality in, 33
supportive, 32–3
World Health Organization (WHO), 133, 234
breastfeeding recommendations, 234
growth charts, 41
wound healing, 112
complications, 147
overlapping healing stages, 107
reduced, 263–7
wound and skin care, 102–17
dressings, 107–8
securement of wounds, 108
written communication, 14
abbreviations, minimal use of, 14
clear and concise, 9
young people (12+ years)
ability to evaluate potential impact of current behaviours, 92
adequate sleep requirements, 83
assessment/maintenance of healthy elimination, 276
communication techniques, 3–8
communication techniques, 7
healthcare needs, 86
high risk of mental health disorders, 60
influences on mental health of, 60–2
listening to, 2
mental health concerns in, 65–8
needs and preferences, 88
nurses working with, 86
participating in decision-making, 75–6
provision of contraceptive and sexual health advice to, 86–7
