

Constellations Index

The index shows all (88) constellations, but not all are featured in this book, sometimes because they are too faint, but in most cases because they are too far south to be seen from latitude 40°N. The names of these southern constellations are shown in *italics*.

Constellations marked with a yellow star contain one or more stars that are at least as bright as magnitude 3.0.

	Scientific (Latin) name	Page	Figs.
★	Andromeda	33	19 20 21 28 29 30 32
