 BOXES, TABLES & FIGURES
 

---

*Tables*

2.1	Intended learning outcomes and assessments in liaison psychiatry	22
3.1	Comparison of DSM-IV and ICD-10, and the proposed criteria of Baumeister <i>et al</i> for adjustment disorder	31
3.2	Somatoform disorders in DSM-IV, ICD-10 and the proposal by Dimsdale & Creed	34
6.1	Examples of different functional somatic syndromes according to medical specialty	67
6.2	DSM-IV codes and categories for somatoform disorders and ICD-10 equivalents	68
6.3	Fibromyalgia: reviews of psychological treatment	74
6.4	Chronic fatigue syndrome: reviews of psychological treatment	75
6.5	Irritable bowel syndrome and functional gastrointestinal disorder: reviews of psychological treatment	76
6.6	Chronic pain: reviews of psychological treatment	78
6.7	Medically unexplained symptoms: reviews of psychological treatment	79
12.1	Cortical and subcortical dementia	170
12.2	The Glasgow Coma Scale	178
12.3	Assessment of outcome after acute brain injury: Glasgow Coma Scale	178
12.4	Duration of post-traumatic amnesia: assessment of outcome after acute brain injury	178
14.1	Levels of psychosocial support in palliative care	206
15.1	Summary of the most commonly used wake-promoting medications	230
16.1	Indicators of physical risk status in patients with an eating disorder	244
16.2	Effects of eating disorders on reproductive function	247
18.1	Prevalence of mental disorder in the general hospital and community	265
23.1	Rates of sexual dysfunction in clinic populations and area of medicine	347
23.2	Medical conditions known to cause sexual dysfunction	348
23.3	The first 1000 referrals to a psychosexual service, by referral source	349
23.4	Indicators of the aetiology of erectile dysfunction	355
23.5	Medication associated with erectile dysfunction	364

## BOXES, TABLES &amp; FIGURES

24.1	Classes of medication commonly associated with psychiatric side-effects	384
25.1	Cochrane systematic reviews relevant to liaison psychiatry	408
28.1	Number of self-harm referrals to the liaison psychiatry service from A&E or acute hospital wards in 2006	449
28.2	Number of non-self-harm referrals to the liaison psychiatry service from A&E or acute hospital wards 2006	449
28.3	Number of staff in the liaison psychiatry services in 2006	450
<i>Figures</i>		
1.1	The CanMEDS framework	1
5.1	A conceptual model of interaction between depression, medical illness and healthcare utilisation	56
5.2	Prevalence of different anxiety disorders in asthma	59
6.1	Stepped care model for the treatment and management of medically unexplained symptoms	81
9.1	Timing of the onset of postnatal psychosis in women with a history of puerperal mania in the first week postpartum	129
12.1	A taxonomy of memory	168
15.1	Typical hypnogram of a young adult showing four cycles of non-rapid eye movement (REM) and REM sleep through the night	223
15.2	Comparisons of typical hypnograms over 24 h in a control person and someone with untreated narcolepsy	227
15.3	Normal transitions between the mutually exclusive states of wakefulness, non-rapid eye movement (REM) and REM sleep	232
15.4	Stepped care model for the treatment of sleep disorders in primary care	237
21.1	Proportion of working-age adults claiming incapacity benefits	323
21.2	Incapacity benefit/severe disablement allowance	323
21.3	The job strain model	326
22.1	Chronology of psychiatric symptoms in HIV infection	332
23.1	The cognitive model in sex therapy	359
23.2	Performance anxiety: cycle of repeating anxiety	368
25.1	Stepped care approach model outlining potential levels of intervention in a general hospital setting	402
