Every effort has been made in preparing this book to provide accurate and up-to-date information that is in accord with accepted standards and practice at the time of publication. Although case histories are drawn from actual cases, every effort has been made to disguise the identities of the individuals involved. Nevertheless, the authors, editors, and publishers can make no warranties that the information contained herein is totally free from error, not least because clinical standards are constantly changing through research and regulation. The authors, editors, and publishers therefore disclaim all liability for direct or consequential damages resulting from the use of material contained in this book. Readers are strongly advised to pay careful attention to information provided by the manufacturer of any drugs or equipment that they plan to use.

Acknowledgements

Firstly, we would like to thank Cambridge University Press for the opportunity to write this second edition of the *Camberwell Assessment of Need for the Elderly (CANE)*. The first paper on the CANE was published in 2000, followed by publication of the first edition of the Camberwell Assessment of Need for the Elderly (CANE), in 2004. Preparing this second edition has given us time to examine 20 years' worth of needs assessment research using the CANE with older people, which has been an enlightening and informative task. The growth in studies using the CANE is encouraging and has helped highlight the potential for future research and use of needs assessment as a health outcome measure. Particularly evident is the need to develop and evaluate interventions that can be used to successfully meet the unmet needs of older people identified within these studies.

We would like to thank all the authors who have contributed chapters to this book and have provided us with new research and insightful perspectives on how the CANE has been or can be used to assess the needs of older people in a variety of contexts. We would also like to extend our appreciation to the many academics and clinicians who have published research showing the effectiveness of using the CANE within such a diverse range of older populations across the world. We would especially like to thank all the participants and their families for their involvement in the published studies about needs assessment research in older people. Mostly, thank you to all for helping to build the evidence base around needs assessment, which can be used to find ways to improve services and care for older people.

Finally, for help with preparing this second edition for publication, we send a special thanks to Chrissy Bailey, business support officer at the Institute of Mental Health, University of Nottingham, for her proficient administrative support and to Elena Profyri, a researcher at City, University of London, for her excellent editing and proofing skills. We also thank Monica Manela and Lucy Webster, two researchers at University College London who helped with updating the prompts and reviewing the terminology used in the CANE assessment to ensure that these reflect more present-day language and contemporary issues impacting older people's lives. Your contributions have all been invaluable in preparing this work for publication.
